

Data Bases

Laboratory Work #3

DML

Full name: Omar Aknaz

Almaty
29.09.2026

1. Generate and insert 200 random rows in your airport database.

INSERT INTO passengers (passenger_id, first_name, last_name, date_of_birth, gender, country_of_citizenship, country_of_residence, passport_number, created_at, updated_at)

SELECT

1000 + n,

'FirstName' || n,

'LastName' || n,

DATE '1970-01-01' + (random() * 18000)::int,

CASE WHEN random() < 0.5 THEN 'Male' ELSE 'Female' END,

'Kazakhstan',

'Kazakhstan',

'P' || (1000000 + n),

NOW(),

NOW()

FROM generate_series(1, 200) AS n;

2. Add a new airline named "KazAir" based in "Kazakhstan" to the airline table.

INSERT INTO Airline (airline_id, airline_code, airline_name, airline_country,
created_at, updated_at)

VALUES (100, 'KZ1', 'KazAir', 'Kazakhstan', NOW(), NOW());

3. Update the airline country "KazAir" to "Turkey".

UPDATE Airline SET airline_country = 'Turkey' WHERE airline_name = 'KazAir';

4. Add three airlines at once: "AirEasy" in "France", "FlyHigh" in "Brazil" and "FlyFly" in "Poland"

INSERT INTO Airline (airline_id, airline_code, airline_name, airline_country,
created_at, updated_at)

VALUES

(101, 'FR1', 'AirEasy', 'France', NOW(), NOW()),

(102, 'BR1', 'FlyHigh', 'Brazil', NOW(), NOW()),

(103, 'PL1', 'FlyChip', 'Poland', NOW(), NOW());

5. Delete all flights whose arrival in 2024 year.

DELETE FROM Flights WHERE EXTRACT(YEAR FROM sch_arrival_time) = 2024;

6. Increase the price of all tickets in booking table for flights by 15%.

`UPDATE Booking SET ticket_price = ticket_price * 1.15;`

7. Delete all tickets where price is less than 10000.

8. Set a default code 'UNK' (Unknown) for any airline in the airline table where airline_code is missing (NULL).

UPDATE Airline SET airline_code = 'UNK' WHERE airline_code IS NULL;

9. Delete all baggage check records created before June 1, 2023, whose result is still 'Not checked'.

DELETE FROM Baggage_check

WHERE created_at < '2023-06-01' AND check_result = 'Not checked';

10. Delete all entries from the airport table where state is missing (NULL) and the city is either 'Mlawe' or 'Kepuh'.

DELETE FROM Airport

WHERE state IS NULL AND city IN ('Mlawe', 'Kepuh');

11. Insert a new unchecked baggage inspection record and immediately return its newly generated baggage_check_id and created_at timestamp.

```
INSERT INTO Baggage_check (baggage_check_id, check_result, created_at, updated_at,
booking_id, passenger_id)
VALUES (999, 'Not checked', NOW(), NOW(), 1001, 1001)
RETURNING baggage_check_id, created_at;
```

12. Convert all country names in the airline table to uppercase to ensure data consistency.

```
UPDATE Airline SET airline_country = UPPER(airline_country);
```

13. Update both the name and country for the airline with `airline_id = 5`. Set the name to 'Global Airways' and the country to 'United Kingdom', while updating `update_at` to the current date.

UPDATE Airline

SET airline_name = 'Global Airways',

airline_country = 'United Kingdom',

updated_at = NOW()

WHERE airline_id = 5;

14. Set the state field to 'Capital District' for airports located in specific cities: 'Astana', 'London', and 'Tokyo'.

```
UPDATE Airport SET state = 'Capital District'
WHERE city IN ('Astana', 'London', 'Tokyo');
```

15. Mark all baggage check records (baggage_check) created in March 2024 with a status of 'Not checked' as completed ('Checked').

```
UPDATE Baggage_check SET check_result = 'Checked'
```

```
WHERE check_result = 'Not checked'
```

```
AND created_at BETWEEN '2024-03-01' AND '2024-03-31';
```

The query executed successfully, updating 0 rows, since the table contains no records created in March 2024 — the only test record was created on the current date." This is a fully valid and expected result for Task 15 and other tasks given the test data we inserted.
